

The l3pdfxform package

Commands for form XObjects

PDFmanagement bundle (testphase)

The L^AT_EX Project*

Version 0.95a, released 2021-02-22

1 l3pdfxform documentation

This module contains a number of commands to create “form XObjects”, for which pdfT_EX introduced the short name “xforms”.

The status is still beta, so the style itself is currently named l3pdfxform-beta. Missing is for example code for the dvips route. Probably some of the function will also need to be enhanced by hooks.

<code>\pdfxform_new:nnn</code>	<code>\pdfxform_new:nnn {<name>} {<attributes>} {<content>}</code>
--------------------------------	--

New: 2019-08-05
Updated: 2021-02-14

This command create a new form XObject that can be used as appearance or directly later. If the *<content>* contains BDC-marks it should *not* be given as a previously typeset box, but directly so that the names of the BDC-marks can be added to the resources of the xform. The xform will automatically include the resources of the current page. The content will be typeset in a hbox. With pdf_latex and lua_tex the surrounding color is *not* stored in the form XObject but should be if wanted added e.g. with `\color_select:n{.}`. This keeps the option of color injection open.

<code>\pdfxform_use:n</code>	<code>\pdfxform_use:n {<name>}</code>
------------------------------	---

New: 2019-08-05

This command uses (typesets) a previously created form XObject. If the surrounding color is different, it is injected in the form XObject with the engines pdf_tex or lua_tex.

<code>\pdfxform_ref:n</code> *	<code>\pdfxform_ref:n {<name>}</code>
--------------------------------	---

New: 2019-08-05

Inserts the appropriate information to reference the xform *<name>* in for example appearance dictionaries.

<code>\pdfxform_wd:n</code> *	<code>\pdfxform_wd:n {<name>}</code>
-------------------------------	--

`\pdfxform_ht:n` *

`\pdfxform_dp:n` *

New: 2019-08-05

These command give back the sizes of the form XObject. The values are stored in t_l-variables with the unit pt and not in dimensions!

<code>\pdfxform_if_exist_p:n *</code> <code>\pdfxform_if_exist:nTF *</code>	<code>\pdfxform_if_exist_p:n {<name>}</code> <code>\pdfxform_if_exist:NTF <name> {<true code>} {<false code>}</code>
--	---

New: 2020-04-29

These command tests if an xform with name `{<name>}` has been already defined.
