The l3pdfutils package pdf-utilities

The LATEX3 Project*

Released XXXX-XX-XX

1 | I3pdfutils documentation

This module contains a number of commands to create xforms.

\pdf_xform_new:nnn	$\pdf_xform_new:nnn \ \{\langle name \rangle\} \ \{\langle attributes \rangle\} \ \{\langle content \rangle\}$
New: 2019-08-05	This command create a new form XObject that can be used as appearance or directly later. If the $\langle content \rangle$ contains BDC-marks it should not be given as a previously typeset box, but directly so that the names of the BDC-marks can be added to the resources of the xform. The xform will automatically include the resources of the current page. The content will be typeset in a hbox. With pdflatex and luatex the surrounding color is not stored in the XObject but should be if wanted added e.g. with $\color_select:n{.}$. This keeps the option of color injection open.
\pdf_xform_use:n	$\pdf_xform_use:n {\langle name \rangle}$
New: 2019-08-05	This command uses (typesets) a previously created form XObject. If the surrounding color is different, it is injected in the XObject with the engines pdftex or luatex.
\pdf_xform_ref:n *	$\pdf_xform_ref:n {\langle name \rangle}$
New: 2019-08-05	Inserts the appropriate information to reference the xform $\langle name \rangle$ in for example appearance dictionaries.
	\pdf_xform_wd:n {\langle name \rangle}
<pre>\pdf_xform_ht:n * \pdf_xform_dp:n *</pre>	These command give back the sizes of the XObject. The values are stored in tl-variables with the unit pt and not in dimensions!
New: 2019-08-05	
	$\pdf_xform_if_exist_p:n \ \{\langle name \rangle\} \\ pdf_xform_if_exist:NTF \ \langle name \rangle \ \{\langle true \ code \rangle\} \ \{\langle false \ code \rangle\} $
New: 2020-04-29	These command tests if an xform with name $\{\langle name \rangle\}$ has been already defined.
